

A few recent blogged links from Derrick Welsh (drawing using mobile devices)

Derrick is contactable on derrick.welsh@gmail.com

just in case you have not read about hockney and the iphone yet

<http://www.thisislondon.co.uk/standard/article-23683409-details/David+Hockney,+iPriest+of+Art/article.do>

and a little bit of animation by my lady

<http://jane-alphabet.blogspot.com/2009/04/portates.html>

and a cool drawing website, possibly the best i've ever see.

super cool computerised grafiti machine from 2004??!!

I'm just starting to get the hang of drawing with the wii

the phone has become a monitor - and these first few drawings have been made with the up down left right and start stop making a mark button

<http://share.ovi.com/album/moshing.public>

This is cool

I've got the wii remote doing a few basic things using mobipad

<http://www.mobi-pad.com/>

downloads

<http://www.mobi-pad.com/download.html>

I've even made a donation to get the customisable 1.2 version.

and it's quite a marvelous feeling connecting the wii remote to a phone, remember when televisions did not have remote controls its a similar feeling when you disconnect the phone from the tv. i have never really used the tv out socket on my n95 because it just feels wrong to watch a slide show of images. but sitting on the sofa with a wii remote controlling the phones transforms the passive experience into a enjoyable one..... flicking back and forth between the images. then you connect it to the web and instead of the mobiles screen being to small, it TV big sized..... this could really catch on.

A clever guy suggested taking the x,z accelerations and translate them into a drawing program.

did my first drawing

<http://share.ovi.com/media/moshing.public/Moshing.11203>

have not worked out how to save it yet....and it's not as good as mario paint but again just thought you would like to know about it if you've never tried it.

this link is worth clicking on

<http://www.mobispray.com/>

my little boy decided we should turn one of his old toys into a beam machine, to draw in the air, i tried to persuade him to make action mans gun have a real beam and the button would be in his back pack but no, he had other ideas.....

we went of and brought this empty sweet gun back [i have to confess in the sweet shop i do let them chose what ever they want, even the gun that shoots sweets.....] away it works great and the kids love it. they are called candy pistols if you wanted to track one down, going to build a funky rectangular pen tomorrow.

i'll just use this thread to pop digital drawing related things in

<http://www.mariopaint.blogspot.com/>

just been looking into game console drawing programs

http://en.wikipedia.org/wiki/Mario_Paint

http://www.nintendo.com/consumer/systems/wii/en_na/channelsPhoto.jsp#doodle

time for a trip to the second hand games shop....

i've got some very old v-tech thing

http://www.youtube.com/watch?v=fLsZqq_to0g

are great and the pride in digital drawing collection is a wired screen that goes over the front of a monitor and the software is on a floppy disk and runs on windows 98.
